DETAILED ACTION

Allowable Subject Matter

Claims 1-8 are allowed.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or provide motivation to form an aluminum nitride joined body comprising a composition of elements structurally related as set forth in claims 1-6 or a method of producing the same as set forth in claims 7-8. Specifically, the prior art fails to teach two aluminide bodies joined without using an adhesive but rather with a metal layer formed between the bodies resulting in a structure as claimed. More specifically, the prior art fails to teach the layers claimed with a plurality of voids in the directly joined regions such that there is a non-joined ratio in the range claimed. Moreover, the prior art of record provides no motivation for forming said voids or rationale for optimizing said voids to meet the claimed dimensions.

Further, the prior art of record does not teach a like method for forming such an aluminum nitride joined body such that the claimed product would be anticipated or obvious. The prior art fails to teach the method claimed wherein aluminum nitride body plates are joined by a metal layer under the conditions claimed. Of particular note, Ohashi (US 6,447,626) teaches a similar method including two heating steps substantially similar to those in the present claims (column 5, lines 10-35). However, Ohashi et al. teach a joining agent substantially different from the claimed metal layer

and is silent on a suitable thickness thereof (column 5, lines 37-49). Further, the prior art of record fails to provide motivation for replacement of the taught joining agent with a metal layer. Finally, while aluminum nitride bodies joined by metal layers are known in the art, there appears to be no expectation of success that such a layer would function in the same fashion as the joining agent of Ohashi et al. after undergoing the two taught heat treatments. More particularly, the prior art appears to use significantly different temperatures in a single treatment when binding aluminum nitride with metal. Nothing in the art appears to teach use of a combination of heat treatments in the ranges claimed with a metal layer at the thickness claimed will produce a desirably bound aluminum nitride body.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
